ECE 600: ECE Graduate Orientation

Introduction

ECE 600 is a required course designed to introduce incoming graduate students to two important topic areas:

1. Information about the graduate program, the department, and the university that is relevant to all incoming graduate students

2. A description of research projects being conducted by faculty in the Electrical and Computer Engineering Department

Students will learn useful information about the graduate program in electrical and computer engineering, the department, the computer facilities, and the university library system. Students will also meet people responsible for managing these resources.

The remaining lectures will involve presentations by department faculty. Each faculty member will introduce themselves, discuss their research interests, and describe one or more research projects they are conducting. This is an excellent opportunity for students to learn about ongoing work in the department in preparation for choosing thesis topics, supervisors, or graduate courses.
